

DESCH Clamp and Flange couplings

Torsionally stiff couplings

SK 11 - GB

Torsionally stiff couplings

Flange couplings DIN 116

Flange couplings are torsionally stiff, particularly sturdy and reliable shaft connections which can withstand jolts and radially or axially acting loads. The connected shafts must be precisely aligned. The flange couplings Form C are equipped with a hollow for axial thrust washers according to DIN 28135. (Applied, for example, with vertical agitator shafts). Axial thrust washers are not supplied and must be ordered separately. The connection dimensions of the flange couplings are in accordance with DIN 116, the centring of the coupling parts is achieved, however, only by means of fitting bolts. Normal design with feather key groove according to DIN 6885/1. Key slot according to DIN 6886 or DIN 6887 on request. In the case of shaft connections with different shaft diameters the coupling size assigned to the largest shaft diameter is used (reducing coupling).

- > Horizontal arrangement: Form A
- > Vertical arrangement: Form C
- > Material: Normal design EN-GJL according to DIN EN 1561. On request in steel up to size 100 and in cast steel from size 110

Clamp couplings DIN 115

Clamp couplings are torsionally stiff and reliable shaft connections which can withstand jolts and radially or axially acting loads. The connected shafts must be precisely aligned. With the two shells which are bolted together the couplings are very easy to assembly and are therefore ideally suitable for shafts connected in series (e. g. transmission shafts). When connecting shafts with different diameters we recommend that the thicker shaft end be offset on the diameter of the thinner one. If this is not possible the model with offset hole corresponding to the larger shaft diameter is used (Form B). Clamp couplings can also be supplied with a protective jacket of sheet

- > Clamp couplings DIN 115
- > Flange couplings DIN 116
- > Clamp couplings 2-piece design
- > Clamp couplings 1-piece design

steel (Form AS; BS or CS). All clamp couplings have feather key groove according to DIN 6885/1.

- > Horizontal arrangement:
 - Form A for shaft ends with same diameters
 - Form B for shaft ends with different diameters
- > Vertical arrangement:
 - Form A with suspension key according to DIN 28134
 - Form C with ring inserts according to DIN 115 Sheet 2
- > Material: Normal design EN-GJL according to DIN EN 1561. GS-45 on request

Please note:

For shaft connections with rigid couplings the shafts must be precisely aligned. In order to avoid any excessive bending load on the coupling bearing must be mounted on both sides of the coupling where long shafts or high rotational speeds are involved.

Clamp coupling 1-piece design

Clamp coupling 2-piece design

30	475	53	83	58,1	M6 x 18	0,92	

- > Wear- and maintenance-free.
- Max. rotation speed: 4000 rpm
- Temperature range : -40°C to +175°C
- On request: Other dimensions, design with keyway according to DIN 6885.

Clamp collars 1-piece and 2-piece design

- > Clamp collars surround the shaft with an even distribution of the clamping force and transmit high torques torsionally stiff and free of backlash. Wear- and maintenance-free! This leads to a dimensionally accurate fit and very strong holding forces without damaging the shaft. Shaft tolerances should be within h11. Dimensions and other designs on request.

- > 1) Max. torque based on DIN 116 Hole tolerance zone:
 Form A: ISO H7 – for shaft tolerance ISO h9
 Form C: ISO N7 – for shaft tolerance ISO k6 and m6 respectively
 Other hole tolerances can be agreed when ordering.

- 2) Max. torques (for hole D1) with allowable load on the feather key and with average overdimension of the following tolerance zones:
 For D1 50: ISO N7 – for shaft tolerance ISO k6
 For D1 50: ISO N7 – for shaft tolerance ISO m6

- 3) Figures for moments of mass inertia and weights for hole D1 (in the case of Form C without axial thrust washer).

- 4) Couplings for D1 = 260 to 500 mm are not included in DIN 116.
 5) Couplings up to size 100 of steel

Flange couplings DIN 116

- > 1) Max. torque based on DIN 116 Hole tolerance zone:
Form A: ISO H7 – for shaft tolerance ISO h9
Form C: ISO N7 – for shaft tolerance
ISO k6 and m6 respectively
Other hole tolerances can be agreed when ordering.

- 2) Max. torques (for hole D1) with allowable load on the feather key and with average overdimension of the following tolerance zones:
For $D1 \leq 50$: ISO N7 – for shaft tolerance ISO k6
For $D1 \geq 50$: ISO N7 – for shaft tolerance ISO m6

- 3) Figures for moments of mass inertia and weights for hole D1 (in the case of Form C without axial thrust washer).

- 4) Couplings for $D1 = 260$ to 500 mm are not included in DIN 116.
5) Couplings up to size 100 of steel
